ActivityPeriodActual Service. One of my recent projects requires me to integrate a financial system with Primavera P6 using SOAP web services. In the development environment, P6 was setup to use UsernameToken to authenticate request messages. For simplicity and testing purpose, SSL, Password Digest and Nonce were disabled. Additional P6 Web Services documentation The following P6 Web Services user documentation is available: The Primavera P6 Web Services Programmer's Guide is available in your P6 Web Services installation folder at \docs\ProgrammersGuide\index.html, or from the Windows Start menu, if you choose to install the documentation when installing P6 Web ...
